doğsan

Continuous Improvement

The main goal of Doğsan is increasing customer satisfaction through continuous improvements.

Teamwork

Doğsan employs highly experienced and skilled personnel and believes in working as a team to accomplish its goals.

your reliable partner

Experience

Established in 1970, Doğsan has a long tradition in suture manufacturing and is the first sterile surgical suture manufacturer in her region.

Doğsan is a well respected brand name in her region for quality and is now offering its quality products to global markets.

Sutures to meet every surgeons needs

Doğsan has a comprehensive range of absorbable and non-absorbable sutures. Manufacturing sutures ranging from USP 11/0 to USP 8, Doğsan offers an extensive variety of products for all branches of surgery including, cardiovascular surgery, microsurgery and ophthalmology.

Customer Focus

Doğsan is committed to understand and meet the needs of her customers: Surgeons, Nurses and Distributors.

As the requirements of modern surgery change, Doğsan uses its experience and customer focus to customize its technology and product range to meet the most demanding surgeons and nurses.

Commitment to Global Quality Standards

We are committed to global quality principles. Our main goal is to increase customer satisfaction and continuously improve our quality by working as a team.

Needles

Structure of Atraumatic Needles

Needle Types According to Curvature

Atraumatic Surgical Needles

name	tip	body	symbol	description
round bodied				- The most popular and classic needle type. - Use in all soft tissue approximation including cardiovascular surgery.
cutting	inside 			- Edges are specially sharpened for an easy and smooth penetration. - Cutting edge is inside the needle. - Used in skin closures and in all applications requiring cutting needles.
	outside 			- Edges are specially sharpened for an easy and smooth penetration. - Cutting edge is outside the needle. - Widely used in skin closures and especially in plastic surgery.
KD 				- Specially designed for cardiovascular surgery for calcified vessels and tough fibrous tissues. - The body is pressed to square shape to increase resistance to bending. - Tip is specially sharpened for superior penetration.
black 				- Used where better visibility and prevention of reflection of the needle is required (eg when blood concentration is high). - Darkening of the metal is made by surface oxidation technique. - Widely used in cardiovascular surgery.
spatuled				- Both side edges and upper surface are cutting while the body is flattened. - Widely used in ophthalmic surgery.
blunt point				- The tip of the needle sharpness of round bodied is reduced. - Uses include repair of liver and sensitive friable tissues.
diamond (taper cut)				- For better penetration and less tissue trauma, tip of the needle is sharpened. - Widely used in cardiovascular/thoracic, orthopedic, obstetrics/gynecologic surgery and repairs of tendons and fibrous
PL 				- Special geometry for easy penetration and high resistance to bending with a slim body. - Widely used in plastic and cosmetic surgery and skin closures.

Absorbable Sutures For All Your Needs

pegelak®

Description:	Absorbable, synthetic, braided, coated suture for medium term wound support with well proven record and composition
Characteristics:	Excellent handling properties Excellent knot security and tie-down Very high tensile strength Medium term wound support (~ 30 days)
Absorption:	Essentially complete in 56-70 days
Material :	polyglycolic acid (%90)-co-L-lactid acid (%10), PGLA <i>[Copolymer of glycolide and L-lactide (90:10)]</i>
Coating:	poly(glycolide-co-L-lactide) PGLA (30:70) and calcium stearate
Structure:	Braided (multifilament)
Colour :	Violet /undyed (beige)
Sterilization:	EO
Packaging:	Available in USP 7/0 (metric 0.5) through USP 2 (metric 5) in boxes of 12 (one dozen) aluminium pouches.

pegelak[®]rapid

Description:	Absorbable, synthetic, braided, coated suture for short term wound support, ideal for fast healing wounds
Characteristics:	Quick absorption - increase in patient comfort and cosmetic results Excellent handling properties Excellent knot security and tie-down Short term wound support (~ 14 days)
Absorption:	Essentially complete in 42 days
Material :	polyglycolic acid (%90)-co-L-lactid acid (%10), PGLA <i>[Copolymer of glycolide and L-lactide (90:10)]</i>
Coating:	poly(glycolide-co-L-lactide) PGLA (30:70) and calcium stearate
Structure:	Braided (multifilament)
Colour :	Undyed (beige)
Sterilization:	Gamma Irradiation
Packaging:	Available in USP 6/0 (metric 0.7) through USP 2 (metric 5) in boxes of 12 (one dozen) aluminium pouches.

pegelak[®]C-plus

Pegelak[®] C-plus

Product Description:	Mid-term absorbable, sterile, synthetic, braided and coated antibacterial surgical suture made of PGLA (polyglactine 910 with Chlorhexidine Diacetate, a wide spectrum antibacterial. Antibacterial effect in addition to proven advantages of Pegelak suture (such as easy handling, high knot security, predictable absorption and high initial strength)
Antibacterial:	When used as intended, by reducing the possible surgical site infection formation along the suture against a wide spectrum of agents with chlorhexidine diacetate content.
Structure:	Multifilament, braided, coated
Polymer:	poly(glycolide-co-lactide (90:10) (PGLA/poliglactin 910) and chlorhexidine diacetate
Coating:	poly(glycolide-co-lactide) [PGLA (30:70)] and calcium stearate
Product range:	USP 6/0 (metric 0,7) – USP 2 (metric 5)
Color:	Violet or Undyed
Sterile Method:	Ethylene Oxide (EO)
Absorption:	Approximately 56-70 days. Wound Support: ≈ 30 days Tensile strength retention: - First Day: 100 % - After 2 weeks ~ 75% - After 3 weeks ~ 40-50 %
Intended use:	Pegelak C-plus, is used soft tissue approximation and/or ligation. It is not used in cardiovascular Surgery, eye (ophthalmic) Surgery) and neurologic tissues. Pegelak C-plus antibacterial is indicated for use in general soft tissue approximation and/or ligation but not for use in cardiovascular, ophthalmic and neurological tissues. Being absorbable, it should not be used where extended approximation of tissue is required or should not be used in patients with known allergic reactions to chlorhexidine diacetate. Pegelak C-plus Sutures are recommended for a wide spectrum of applications such as, fascia, peritoneum, subcutaneous/intracutaneous tissue (fat), skin tissues and laparoscopic incisions.

pegesorb[®] rapid

Description:	Absorbable, synthetic, braided, coated suture for short term wound support, ideal for fast healing wounds
Characteristics:	Quick absorption - increase in patient comfort, cosmetic results Excellent handling properties Excellent knot security and tie-down Short term wound support (~ 14 days)
Absorption:	Essentially complete in 42 days
Material :	polyglycolic acid, PGA 100%
Coating:	poly(glycolide-co-L-lactide) PGLA (30:70) and calcium stearate
Structure:	Braided (multifilament)
Colour :	Undyed (beige)
Sterilization:	Gamma Irradiation
Packaging:	Available in USP 5/0 (metric 1) through USP 2 (metric 5) in boxes of 12 (one dozen) aluminium pouches.

tekmon®

Description:	Absorbable, synthetic, monofilament suture for short-medium term wound support, with a smooth surface for fast healing wounds
Characteristics:	High initial strength Easy passage through tissue/smoothness of a monofilament Minimal tissue reaction Very good knot security Short -Medium term wound support (~ 21 days)
Absorption:	Essentially complete in 90-120 days
Material :	polyglycolide(%75)-co-caprolactone (%25), PGCL
Structure:	Monofilament
Colour :	Violet/Undyed (clear)
Sterilization:	EO
Packaging:	Available in USP 6/0 (metric 0.7) through USP 2 (metric 5) in boxes of 12 (one dozen) aluminium pouches.

pedesente®

- Description:** Absorbable, synthetic, monofilament suture for long term wound support, ideal for slow healing wounds
- Characteristics:** Easy passage through tissue/smoothness of a monofilament
High initial strength
Slow decrease in tensile strength
Minimal tissue reaction
Ideal for long term support
- Long term wound support (~ 60 days)
- Absorption:** Essentially complete in 180-210 days
- Material :** polydioxanone, PDO 100%
- Structure:** Monofilament
- Colour :** Violet
- Sterilization:** EO
- Packaging:** Available in USP 7/0 (metric 0.5) through USP 2 (metric 5) in boxes of 12 (one dozen) aluminium pouches.

Non-Absorbable Sutures

propilen®

Description: Non-Absorbable, monofilament suture, made of specially extruded condensed polypropylene, very smooth and ideal for cardio vascular surgery

Characteristics: Ideal suture for cardio vascular surgery
Very smooth flow through the tissue
Very high tensile strength
High softness and flexibility
Minimum tissue reaction, ideal for infected tissues
Good knot security

Tensile strength: Permanent -Very high tensile strength

Material : polypropylene

Structure: Monofilament

Colour : Blue/Undyed (clear)

Sterilization: EO

Packaging: Available in USP 10/0 (metric 0.2) through USP 2 (metric 5) in boxes of 12 (one dozen) pouches.

trofilen®

- Description:** Non-Absorbable, monofilament suture, made of specially extruded Polyvinylidene fluoride (PVDF) a very inert material ideal for plastic and cardiovascular surgery
- Characteristics:** Very smooth flow through the tissue
Highest tensile strength in monofilaments
Excellent pliability and flexibility
Minimum tissue reaction, ideal in infected tissues
- Tensile strength:** Permanent - Very high tensile strength
- Material :** polyvinylidene fluoride (PVDF)
- Structure:** Monofilament
- Colour :** Blue
- Sterilization:** EO
- Packaging:** Available in USP 8/0 (metric 0.4) through USP 2 (metric 5) in boxes of 12 (one dozen) pouches.

daylon®

- Description:** Non-Absorbable, monofilament suture, made of polyamide classic suture for plastic and ophthalmic surgery
- Characteristics:** Uniform diameter
Minimal memory
High Flexibility
Very good knot security
Smooth passage through tissue
- Tensile strength:** Permanent
- Material :** Polyamide 6 -6.6
- Structure:** Monofilament
- Colour :** Blue : USP 6/0 - USP 2
Black: USP 11 /0 - USP 8/0
- Sterilization:** EO
- Packaging:** Available in USP 11 /0 (metric 0.01) through USP 2 (metric 5) in boxes of 12 (one dozen) pouches.

politer®

Description:	Non-Absorbable, synthetic, braided, coated suture, made by braiding of fine polyester filaments, ideal for cardiovascular & implant surgery for very long term support
Characteristics:	Very high tensile strength Permanent support Excellent knot security Excellent handling Providing maximum security under stress
Tensile strength:	permanent, no known significant change in tensile strength retention in vivo.
Material:	polyethylene terephthalate (polyester)
Coating:	silicone based
Structure:	Braided (multifilament)
Colour:	Green / White
Sterilization:	EO
Packaging:	Available in USP 6/0 (metric 1) through USP 5 (metric 7) in boxes of 12 (one dozen) pouches. Or in the case of multistrand sutures with PTFE Pledgets (K-PAK), half a dozen (6) boxes.

ipek/silk

Description:	Non-Absorbable, braided, coated suture, made by braiding of fine processed natural silk fibers called fibroins, known for handling properties and used in many branches of surgery
Characteristics:	Excellent handling Excellent knot security Coated suture for smooth flow through the tissue
Tensile strength:	progressive degradation of the silk fibers resulting in gradual loss of tensile strength
Material :	natural silk fibers of Bombyx mori
Coating:	silicone based
Structure:	Braided (multifilament) /twisted virgin silk for USP 8/0
Colour :	Black / Blue only for 8/0 virgin silk
Sterilization:	EO
Packaging:	Available in USP 8/0 (metric 0.4) through USP 3 (metric 6) in boxes of 12 (one dozen) pouches.

daxton[®]-D

Description:	Daxton D is a non-absorbable, sterile surgical monofilament suture, composed of polytetrafluoroethylene (PTFE). PTFE suture has nonporous structure.
Characteristics:	Compatible needle/suture diameters, excellent tensile strength, secure knot positioning, minimum plaque formation, minimum tissue reaction, easy handling, high softness and minimal surface friction, elasticity.
Tensile strength:	Permanent
Material:	Polytetrafluoroethylene (PTFE)
Structure:	Monofilament
Colour:	White
Sterilization:	EO
Packaging:	Available in USP7/0 (metric 0.5) through USP 2/0 (metric 3) in boxes of 12 (one dozen) pouches.

daxton®-K

Description:	daxton [®] -K is a non-absorbable, sterile surgical monofilament suture, composed of polytetrafluoroethylene (PTFE), with chemical formula (C ₂ F ₄) _n , that has been expanded to an ePTFE suture with a porous microstructure and contains air.
Characteristics:	Compatible needle/suture diameters, excellent tensile strength, secure knot positioning, minimum tissue reaction, easy handling, high softness and minimal surface friction, elasticity.
Tensile strength:	Permanent
Material:	expanded Polytetrafluoroethylene (ePTFE)
Structure:	Monofilament
Colour:	White
Sterilization:	EO
Packaging:	Available in KD01 through KD5 in boxes of 12 (one dozen) pouches.

Description:	Non-absorbable stainless steel wire
Characteristics:	360 ° rotating or fixed head with needle alternatives (Cutting, diamond, trocar point), very high tensile strength, minimum tissue reaction, easy pliability and handling.
Tensile strength:	Permanent
Material:	Monofilament
Structure:	316L
Colour:	Metallic grey
Sterilization:	EO
Packing:	Available in USP 2 (metric 5) - USP 8 (metric 10) in boxes of 2 pouches with rotating or fixed head needle alternatives

dopace®

Description:	Temporary pacing wire, PE insulated 316L stainless steel wire
Characteristics:	Intracorporeal curved needle and extracorporeal straight breakaway needle, with or without anchor. With anchor option no need for suture to fix it and less trauma on myocardium muscle.
Tensile strength:	Permanent
Material:	Twisted 316L stainless steel wire, with polyethylene (PE) coated (sheathed)
Structure:	-
Colour:	-
Sterilization:	EO
Packing:	Available in USP 2/0 (metric 3) in boxes of 12 (one dozen) pouches.
